## **Proof of concept for patent-pending Poche\_Truss has been built.**

Boulder, CO July 22, 2024 - A 684sf backyard ADU in Boulder is the first build using Studio Points' proprietary Poche\_Truss building system. The project consists of 19 prefab trusses that were installed in under 10 hours with the truss package cost of \$5730, cutting time, labor, materials and cost to a fraction of conventional 2X construction. Watch it get built [here](#).

Studio Points' is a Boulder -based architecture studio focusing on small houses, ADUs and backyard studios using the patent-pending Poche\_Truss building system. The Poche\_Truss is a triangulated structure that includes both walls and the roof in a single truss. We most commonly see trusses used for roofs but the Poche\_Truss includes both walls to either side of the roof truss. Manufactured in a conventional truss facility and installed on site by a typical framing crew, the Poche\_Truss has the added benefits of intelligence. Intelligence built in by truss capacity to be shaped to respond to climate and regional influences creating a high performing building, to manage precipitation without troublesome gutters, and to create lively and custom interiors all without a custom build upcharge. Learn about the Poche\_Truss with this [video](#).

"I think the trusses are a good idea, they were just like building with LEGOS, snap, snap, snap."  
*Isaac, Colorado Strong Construction*

"They are easy and fun to work with, something new." *Mario, Colorado Strong Construction*

"They're great, I can see that they went up fast." *Jon JXG engineering*

"It was nice to do something different, it was nice to learn another way to build a house." *Mike, Josh Mitchell Construction*

ADUs are small houses, typically in backyards of the main house, more commonly known as Granny Flats, ADUs provide housing opportunities not only for expanding families but for anyone looking to live in an amenity rich neighborhood. Increasingly cities and States are updating their zoning codes to make building these small houses less restrictive. Prefab options have infiltrated this market, generally offering an efficient boxy rectangle but Studio Points' interest in this market is bringing a new way to achieve custom house options with the prefab Poche\_Truss that increases building performance and contextual responses as well as advancing Studio Points' focus of creating abundance through design.
